

JACK HUMPHREY

VP Engineering Capabilities for Indeed.com

Austin, TX 78704
jackh+resume@fivewells.com
512-826-7300

I enjoy leading high-caliber teams to create software that reaches millions of users. I have formed new teams and worked with existing teams. I've led new product/feature efforts and iterative improvement. I have guided teams through process improvement and delivery of measurable business value.

I feel successful when my teams love what they do and our users love what we've built. I tend to be hands-on and technical, and I love to leverage data for decision making.

As VP Engineering Capabilities at Indeed, I have led a set of 10 different groups and over 500 people. While I spend a lot of time on strategy in this role, I still like to dive into the details with my teams when appropriate. I am also proud to have coached many great people as they've developed in their careers.

I started at Indeed in 2009 as a Senior Engineering Manager for the Job Search development team. In 2010, I had the opportunity to form the Resume team to build a new product suite. I grew with Indeed into a position as Senior Engineering Director by 2013. In that role, I led teams in Austin and Seattle that built scalable consumer web applications. I became a VP in 2015.

Before Indeed, I was a Tech Lead/Manager at Google in New York and Santa Monica, leading AdWords projects. Before that, I led the development of the data acquisition platform for Coremetrics. My previous software development jobs were at Reactivity, Trilogy, and EBT/Inso.

Specialties: Data-driven engineering leadership, agile development process, managing and mentoring technical staff, web services/application development, Java, JavaScript, C/C++, various SQL and NoSQL databases
Authorized to work in the US for any employer

WORK EXPERIENCE

VP Engineering

Indeed - Austin, TX
April 2015 to Present

Since 2015, I have led efforts to transform Indeed's engineering capabilities. Some highlights:

- Designed multi-group, multi-geography organizational structure to deliver engineering capabilities for product development.
- Hired and coached engineering directors and senior managers in a variety of roles.
- Introduced OKR practice to align groups and teams with mission
- Velocity in 2019: developed metrics for measuring velocity and set company-wide improvement goals. So far in 2019, Indeed teams have reduced their time to deliver code to production by 35%.

- Delivered a continuous delivery platform that increases deployment automation. As of late 2019, ~10% of deployables reach production with no human intervention.
- Delivered self-service deployment infrastructure for orchestrating applications, services, and periodic job workloads. Reduced provisioning time from weeks/days to minutes for most workloads.
- Delivered self-service database provisioning and management for MySQL, Mongo, and Redis. Engineers have used this tool provision over 600 data resources in less than 2 years.
- Provided mechanisms to track team utilization of shared compute platforms.
- Established Service-Level Objectives practice that allow teams to move fast while maintaining reliability.
- Significantly reduced security risks associated with malicious actors.
- Built systems to enable privacy best practices and compliance with global privacy regulations (GDPR, CCPA).
- Improved ability to deploy and test pre-production code.
- Developed an annual Innovation Awards program to recognize and celebrate engineering innovation.
- Hired and staffed our Open Source program, which is now being recognized for its innovation programs to support open source sustainability.

2019-Present: VP and Group Manager, Engineering Capabilities & Global Infrastructure

I continue to provide cross-functional leadership for the engineering platforms described below. In addition, I lead the group that owns low-level technology infrastructure for Indeed.

2017-2019: VP, Engineering Capabilities

I have responsibility for 9 groups and around 500 people. We own and develop the engineering platforms used by all product development teams at Indeed. Our initiatives support OKRs for:

- engineering velocity
- reliability
- performance
- developer productivity
- security
- privacy
- user experience
- compute infrastructure
- test automation

We also provide certain embedded functional expertise (QA, SRE, Data Science, Technical Writing).

Indeed's Open Source Program also sits in this organization.

2016-2017, VP Global Engineering Capabilities

I led a team of engineering leaders to develop product development capabilities. In this position, I influenced the kinds of initiatives that came together into the org I formed in 2017.

2015-2016, VP Engineering, Applications

I provided leadership support for teams working on user-facing applications. I coordinated efforts in areas such as front-end technology and application security. I led org-wide initiatives and mentored leaders as we grew to over 500 engineers.

Engineering Leadership (various)

Indeed.com - Austin, TX

April 2009 to April 2015

I started at Indeed as a Senior Engineering Manager for the Job Search development team. By 2013, I was Senior Engineering Director for Jobseeker Applications, leading Job Search, Resume, and Indeed Apply teams in Austin and Seattle. These teams developed scalable consumer web applications as we grew to 180 million unique visitors per month. I became a VP in 2015.

Some highlights:

- Led engineering efforts to launch Job Search in 40 countries and 20 languages.
 - Led development of our initial service-oriented framework in 2010.
 - Led and contributed to many efforts to improve the efficiency of our operations team.
 - Led effort to build single-sign-on for jobseeker and employer accounts.
 - Led efforts to better monetize existing products, including email job alerts.
 - Formed and led the startup Indeed Resume team to rapidly build products for jobseekers and employers. Launched two significant products in less than 6 months.
 - Led initial development of Indeed's approach to engineering career growth and performance evaluation
 - Created a performance data tool to help engineers and managers track contributions over time (go.indeed.com/benefits-of-hindsight)
 - Oversaw launch and iterations of Indeed University, a 12-week on-boarding program for new college grads (go.indeed.com/iu-wow)
 - Introduced new development practices, processes, and tools
 - Launched engineering blog (engineering.indeedblog.com, medium.com/indeed-engineering). I have served as a hands-on "editor in chief" ever since.
 - Helped launch @IndeedEng tech talk series (engineering.indeedblog.com/talks) in 2013.
 - Led efforts to open source useful tools and libraries.
 - Evolved Indeed's intern program and ran the program in 2013 (22 interns) and 2014 (30 interns).
 - Launched Indeed's Seattle engineering office and oversaw its growth in 2014 and 2015.
 - Engaged in recruiting strategy and execution. Presented Indeed to candidates and conducted 100s of technical interviews.
-

Software Engineer and Tech Lead/Manager

Google

November 2004 to March 2009

I led project teams developing new features for AdWords advertisers. In addition to my own technical contributions to these projects, I managed engineers of varying skill and experience levels to achieve their goals and help realize project success.

Lead Software Developer

Coremetrics

July 2001 to November 2004

I was responsible for the data acquisition platform for a massive-scale web site analytics data warehouse.

Senior Technologist & Technical Lead, New Venture Creation

Reactivity

2000 to 2001

Software Developer / Team Lead

Trilogy Software

1997 to 2000

Software Engineer

Inso Corporation

1995 to 1997

EBT was acquired by Inso in 1996.

Software Engineer

Electronic Book Technologies

1995 to 1997

Developed an innovative web content management system called DynaBase.

EDUCATION

BS in Computer Science

Brown University - Providence, RI

1991 to 1995

High School

St .Stephen's Episcopal School - Austin, TX

1987 to 1991

Brownwood ISD

SKILLS

- **Executive Management (4 years)**
- **Leadership Development (8 years)**
- **Coaching (10+ years)**
- **Agile Software Development (10+ years)**
- **Technology Management (10+ years)**
- **Written Communication (10+ years)**
- **Public Speaking (10+ years)**
- **Web Services (10+ years)**
- **Application Development (10+ years)**
- **Web Development (10+ years)**
- **Java (10+ years)**
- **JavaScript (10+ years)**
- **Python (10+ years)**
- **C++ (3 years)**
- **SQL (10+ years)**
- **NoSQL (7 years)**
