

JACK HUMPHREY

SENIOR ENGINEERING LEADER

(512) 826-7300
JACK@JACKHUMPHREY.ME
AUSTIN, TEXAS

SUMMARY

Strategic, results-oriented leader with a track record of:

- Building and leading high-performing teams
- Developing user-centric and scalable products and platforms
- Driving innovation and transformation through data-driven strategies

As an Eng VP, I bring an authentic leadership style and a focus on delivering measurable impact.

KEY COMPETENCIES

Organization Leadership	Plan and align organizations from 50 to 500. Make resource tradeoffs to maximize business value and impact.
Inspirational Leadership	Provide compelling vision for the future. Inspire team members to deliver on that vision.
Data-Driven	Leverage data to guide opportunity analysis and product experimentation.
Communication	Champion readable, direct written communication. Deliver engaging, authentic, and accessible presentations in internal and external settings.
Transparency & Trust	Show openness, honesty, and vulnerability in all settings. Build trust with stakeholders and team members.

EXPERIENCE

Sep 2024 – Present
(1.5 years)

VP Engineering, Tricentis Test Automation Portfolio

Tricentis – Austin, TX

I currently lead a fast-expanding team of ~140 engineers within Tricentis R&D. Initially entrusted with 17-year-old flagship product org, I was given additional product responsibilities within my first year. Our flagship product Tosca enables enterprises to develop test automation at scale, speeding up release cycles, enhancing software quality, and optimizing workflows.

- Directly manage a team of 1 VP and 4 Eng Directors, who in turn have teams in multiple sites across Central Europe and Israel.
- Implemented careful and well-communicated adjustments to org structure as needed to produce better outcomes.
- Led portfolio-style analysis of time investment to enable guardrails that balance strategic and reactive work.
- Sponsored efforts to increase the effectiveness and adoption of AI augmented coding for higher quality and velocity of development.
- Set and tracked goals to improve maintainability, quality, delivery velocity, and decision-making.

- Provided executive sponsorship and advice to program working to improve and standardize development process across Tricentis.
- Worked to introduce new tools to support learning (O'Reilly Online Learning) and delivery process analytics (Jellyfish).

May 2022 – Sept 2024
(2 years 4 months)

Senior Engineering Director, LinkedIn Talent Solutions

LinkedIn – Remote (Austin, TX)

I was Engineering Chief of Staff for Talent Solutions, a group of ~700 engineers developing hiring and learning products. Initially intended to be short-term, this position was extended due to a long pause in org growth.

- Responsible for operations of Engineering org, including operational excellence, strategic initiatives, goal setting/tracking, and org evolution.
- Improved goal setting and leadership alignment by coaching leaders at different levels on OKR best practices and supporting the adoption of a new OKR management platform (Viva Goals).
- Advised engineering and product leaders on strategic initiatives for talent marketplace products (Recruiter, Online Jobs, Employer Brand) and LinkedIn Learning platform.
- Reviewed org structure in terms of spans and layers and provided a detailed analysis that was influential in later leadership decisions.
- Efficiently managed significant org changes to align resource allocation with company priorities and to reduce overall org chart depth.
- Led a geographically distributed team of 16 technical program managers who were critical in delivering value by coordinating cross-team collaboration, managing risk, communicating with stakeholders, and optimizing engineering processes. Members of this team were in high demand by all Eng managers because of their strong track record.
- Analyzed opportunity to expand Engineering presence in Austin, which was well received but not funded due to macro-economic conditions.

Aug 2020 – Apr 2022
(1 year 8 months)

Senior Engineering Director, Staffing Works

Google – Austin, TX

I led the ~100-person multi-site engineering arm of Staffing Works in Corporate Engineering. This group developed and integrated solutions for Google's hiring and recruiting efforts, regularly launching features that impacted recruiting efficiency and user satisfaction.

- Strategically grew overall group by 27% (21% Eng growth), established a more effective org structure, and grew Product Analyst team to enable analysis-based decision making.
- Defined mission and vision for group, presented to key stakeholders and to teams in quarterly all-staff meetings.
- Influenced product and technical roadmaps, guided goal setting. Led pivot to focus and consolidate investment on highest priorities.
- Strengthened relationships with Recruiting org at multiple levels. Presented to People Operations leadership.
- Influenced leaders in adjacent domains with practical advice and examples.
- Directly managed and coached several eng managers of varying levels. Connected often with skip-level managers, and individual contributors via 1:1s, office hours, and listening sessions.

- Experimented with new methods to analyze team engagement.
- Recognized by colleagues as an inclusive leader who helped good ideas become great ideas, showed consideration for our teams as people, articulated inspiring vision, modeled Google values, communicated well, focused on the big picture, and made practical decisions.

Apr 2009 – Jul 2020

Indeed – Austin, TX (11 years 3 months)

Apr 2015 – Jul 2020

VP Engineering & Group Manager, Infrastructure & Engineering Platforms

In this second phase of my Indeed career, I led an organization of 7-9 groups and 400-500 people, focused on transformational engineering platforms and underlying infrastructure. After a company-wide GM restructure, I reported to the General Manager of Platforms and became Group Manager, responsible for all functions contributing to infrastructure and engineering platform development.

- Owned platforms for engineering velocity, reliability, performance, developer productivity, security, privacy, front-end development, compute infrastructure, test automation, data science, and A/B test setup/analysis. Example accomplishments:
 - Velocity program provided metrics and company-wide improvement goals, resulting in company-wide >40% reduction of code delivery time in 2019.
 - Continuous delivery platform increased deployment automation, enabling code to reach production with no human intervention.
 - Self-service workload deployment infrastructure and DB provisioning systems reduced provisioning time from weeks/days to minutes for most workloads.
 - Front-end component libraries and micro-frontend platform enabled faster product development and greater consistency of user experience.
 - Privacy systems enabled best practices and compliance with global regulations.
- Led company-wide embedded functions such as QA (2017-2019), Data Science (2017-2019), and SRE (2017-2020).
- In 2019, also became responsible for Infrastructure Platforms teams covering systems/network engineering, database architecture, and cloud services.
- Hired and coached engineering directors and senior managers in a variety of roles.
- Mentored leaders around the engineering organization.
- Introduced OKR practice to align group with overall mission.
- Developed an annual Innovation Awards program to recognize engineering innovation.
- Hired and staffed our Open Source program, which became recognized for its innovative programs in open source sustainability.
- Led a group of writers who acted as technical content specialists.

Apr 2009 – Apr 2015

Engineering Leader / Senior Engineering Director, Jobseeker Applications

In this first phase of my career at Indeed, I reported to the VP of Engineering and led development of important products and infrastructure, with a focus on jobseeker-facing applications. My role evolved from Sr. Eng. Manager to Sr. Eng. Director during this period of very rapid growth for the company.

- Led Job Search, Resume, and Indeed Apply teams in Austin and Seattle.
- Teams developed consumer products that scaled to 180mm unique visitors per month.
- Led engineering efforts to launch Job Search in 40 countries and 20 languages.
- Developed the initial service-oriented framework in 2010.
- Improved efficiency of our operations team.
- Built single-sign-on for jobseeker and employer accounts.
- Improved monetization of existing products, e.g. email job alerts.
- Rapidly delivered new Resume products for jobseekers & employers.
- Developed Indeed's approach to engineering career growth and performance evaluation.
- Built a performance data tool to help engineers and managers track contributions over time (go.indeed.com/benefits-of-hindsight).
- Oversaw launch and iterations of Indeed University, a 12-week onboarding program for new college grads (go.indeed.com/iu-wow).
- Introduced new development practices, processes, and tools.
- Launched engineering blog (engineering.indeedblog.com). Served as a hands-on "editor in chief" through 2020.
- Helped launch @IndeedEng tech talk series in 2013.
- Led efforts to open source useful tools and libraries.
- Evolved and ran Indeed's intern program in 2013 (22 interns) & 2014 (30 interns).
- Launched Indeed's Seattle engineering office and oversaw its growth in 2014 and 2015.
- Engaged in recruiting strategy and execution. Presented Indeed to candidates and conducted 100s of technical interviews.

Nov 2004 – Mar 2009

Software Engineer and Tech Lead/Manager, AdWords

Google – New York, NY & Santa Monica, CA

I led project teams developing new features for AdWords advertisers. In addition to my own technical contributions to these projects, I managed engineers of varying skill and experience levels to achieve their goals and help realize project success.

Jul 2001 – Nov 2004

Lead Software Developer, Engineering Manager

Coremetrics – Austin, TX

I reported to the VP of Engineering and led a small team that owned the data acquisition platform for a massive-scale web analytics data warehouse.

2000 – 2001	Senior Technologist & Technical Lead, New Venture Creation Reactivity – Austin, TX <i>I researched emerging technologies and managed development of prototypes based on these technologies to create intellectual property for spinout companies.</i>
1997 – 2000	Software Developer / Team Lead Trilogy Software – Austin, TX <i>I worked in a core engineering team that owned software platforms to enable web application and e-commerce software development.</i>
1995 – 1997	Software Engineer Electronic Book Technologies / Inso Corporation – Providence, RI <i>In my first full-time role as a software engineer, I played an instrumental role in developing DynaBase, an innovative web content management system, leveraging work EBT had done on a powerful object-oriented SGML CMS.</i>

EDUCATION

1991-1995	BS in Computer Science Brown University <i>My CS coursework focused on software engineering and object-oriented database systems, and I was a TA for software engineering and systems design courses.</i>
